What is a microfibre cloth?

Our cloths are a microfibre blend of polyimides, each fibre is finer than a single strand of silk. The material is split several times to make a finer thread which is then woven together. This allows the cloth to remove dirt more efficiently from surfaces due to the higher number fibres per cm² of cloth.

Human Hair

Due to their thinness and density, microfibre cloths can remove dirt using the mechanical force created by rubbing the cloth across a surface. The dirt particles are absorbed deep into the spaces created between the fibres. This allows the cloth to effectively Hoover up dirt, drawing it into the cloth rather than pushing dirt around the surface. Providing a superior clean without the use of any chemicals.
