

# Reynard™

## 0.5%

### chlorhexidine clinical skin prep range.

Created for use in neonatal units and maternity. This range can also be used for general use, including paediatrics and areas where higher concentrations of chlorhexidine digluconate are not preferred due to potential allergies, skin reactivity and potential risk. This range is alcohol-free and therefore suitable for use where application of IPA is not suitable.

Reynard™ is reassurance.

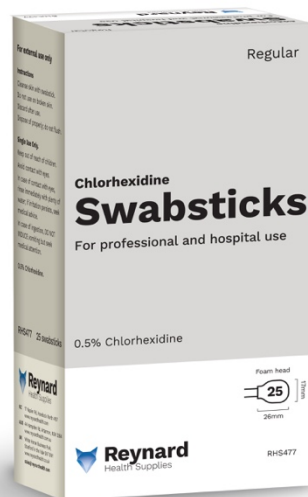

## 0.5% Chlorhexidine Swabstick

Individually sealed in easy-peel sachets, containing a wetted foam head measuring 25mm x 17mm. This is attached to a 10cm plastic stick giving a coverage area of 144cm<sup>2</sup>. Colour and stain-free.

Product code: RHS477

## 0.5% Chlorhexidine Prep Pad

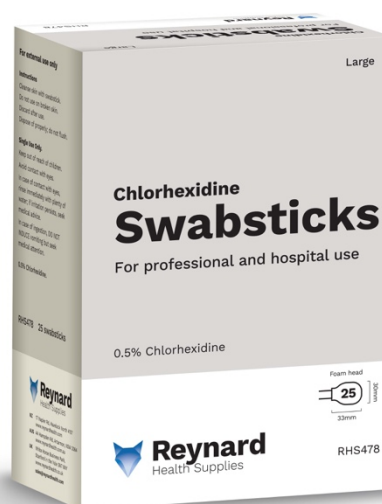

Individually sealed in easy-tear twin sachets. Each 45gsm pad is 6cm x 6cm with a 100cm<sup>2</sup> coverage area. Colour and stain-free.

Product code: RHS479

## 0.5% Chlorhexidine Large Swabstick

Individually sealed in easy-peel sachets. Each sachet contains a large wetted foam head (33mm x 30mm) attached to a 15cm plastic stick. The larger head allows for a greater coverage area (484cm<sup>2</sup>). Colour and stain-free.

Product code: RHS478

### What Is an ideal use for this range?

This range was designed for use on neonates and can be used for procedures such as central line insertion (PICC, Umbilical lines) and intercostal catheter insertion.

### What are the benefits of using a 0.5% Chlorhexidine solution?

Using this alcohol-free, 0.5% chlorhexidine solution rapidly decreases the likelihood of skin damage with prems. It also provides the added benefit of having one product safe for use on all babies.

### What are the benefits of using a swabstick?

The stick is good for ease of use, and helpful for getting between fingers and around umbilical cords. They contain the perfect amount of solution for appropriate moisture.

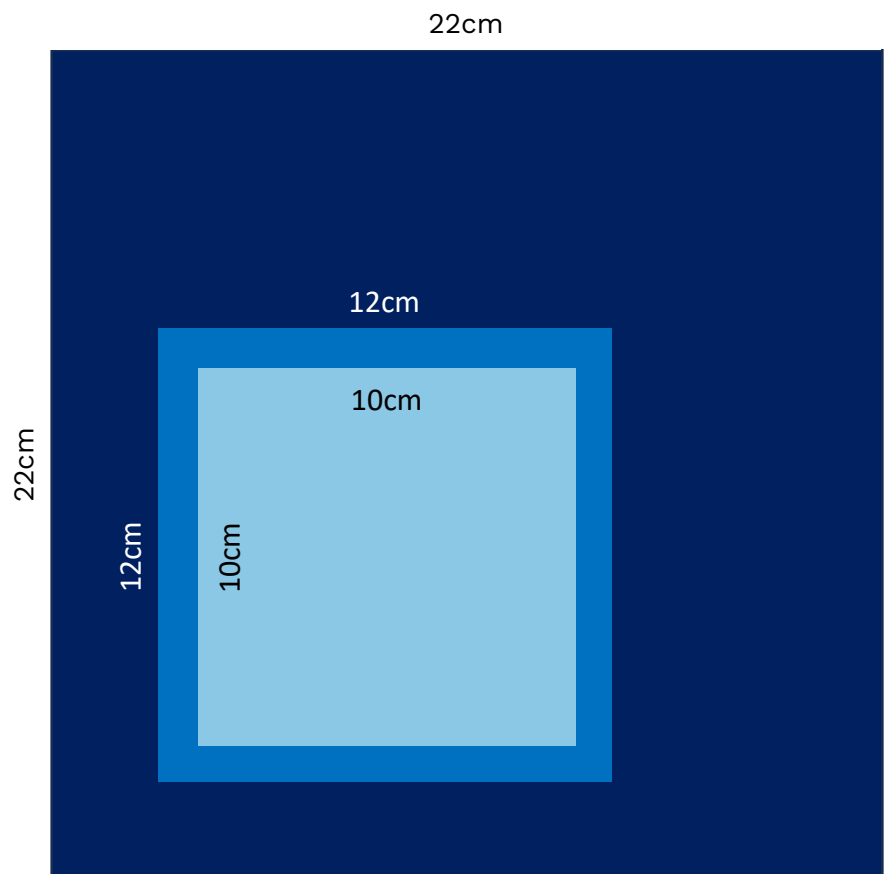

### The benefits of prep pads & swabsticks over solution & gauze

- ✓ Cost reductions
- ✓ Minimal waste
- ✓ Ease of use
- ✓ One-step process
